Question 1

Flag question

Coders here is a simple task for you, you have given an array of size ${\it N}$ and an integer ${\it M}$.

Your task is to calculate the difference between maximum sum and minimum sum of N-M elements of the given array.

Constraints:

1<=t<=10

1<=n<=1000

1<=a[i]<=1000

Input:

First line contains an integer T denoting the number of testcases.

First line of every testcase contains two integer N and M.

REC-CIS	the alements of array
	Next line contains ${\it N}$ space separated integers denoting the elements of array
	Output:
	For every test case print your answer in new line
	SAMPLE INPUT
	1
	51
	12345
	SAMPLE OUTPUT
	4
	Explanation
	Explanation
	M is 1 and N is 5 so you have to calculate maximum and minimum sum using (5-1 =) 4 elements.
	Maximum sum using the 4 elements would be (2+3+4+5=)14.
	Minimum sum using the 4 elements would be (1+2+3+4=)10.
	Difference will be 14-10=4.

REC-CIS

#include<stdio.h> int main() 2 3 ₹ 4 int t: 5 scanf("%d",&t); while(t--) 6 7 ₩ 8 int n,m,d,min,temp; 9 scanf("%d %d",&n,&m); 10 d=n-m; 11 int arr[n]; for(int i=0;i<n;i++) 12

Answer: (penalty regime: 0 %)

```
13
             scanf("%d",&arr[i]);
14
             for(int j=0; j<n; j++)</pre>
15 ₹
16
                 min=j;
17
                 for(int k=j;k<n;k++)</pre>
18 ▼
19
                      if(arr[k]<arr[min])</pre>
20
                      min=k;
21
22
                 temp=arr[min];
23
                 arr[min]=arr[j];
24
                 arr[j]=temp;
25
26
             int maxsum=0,minsum=0;
27
             for(int a=0;a<d;a++)</pre>
28
             minsum+=arr[a];
29
             for(int b=n-1;b>m-1;b--)
30
             maxsum+=arr[b];
31
             printf("%d\n", maxsum-minsum);
32
33
34 }
        return 0;
```

Ouestion 2

Input Constraint

SAMPLE INPUT

1 < N < 10

A new deadly virus has infected large population of a planet. A brilliant scientist has discovered a new strain of virus which can cure this disease. Vaccine produced from this virus has various strength depending on midichlorians count. A person is cured only if midichlorians count in vaccine batch is more than midichlorians count of person. A doctor receives a new set of report which contains midichlorians count of each infected patient, Practo stores all vaccine doctor has and their midichlorians count. You need to determine if doctor can save all patients with the vaccines he has. The number of vaccines and patients are equal. **Input Format** First line contains the number of vaccines - N. Second line contains N integers, which are strength of vaccines. Third line contains N integers, which are midichlorians count of patients. **Output Format** Print a single line containing 'Yes' or 'No'.

Strength of vaccines and midichlorians count of patients fit in integer.

5 123 146 454 542 456 100 328 248 689 200 **SAMPLE OUTPUT** No

Output Format

Input Constraint

SAMPLE INPUT

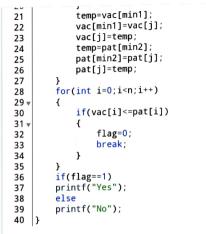

1 < N < 10

Print a single line containing 'Yes' or 'No'.

Strength of vaccines and midichlorians count of patients fit in integer.

Answer: (penalty regime: 0 %)

```
#include<stdio.h>
    int main()
 3 ₹ {
        int n,min1,min2,temp,flag=1;
        scanf("%d",&n);
        int vac[n],pat[n];
        for(int i=0;i<n;i++)
        scanf("%d",&vac[i]);
        for(int i=0;i<n;i++)
10
        scanf("%d",&pat[i]);

Question 4

CONSTRAINTS:

1<=m<=106

Correct

You are given an array **A** of non-negative integers of size **m**. Your task is to sort the array in non-decreasing order and print out the original indices of the new sorted array. Example: $A = \{4,5,3,7,1\}$ After sorting the new array becomes A={1,3,4,5,7}. The required output should be "4 2 0 1 3" INPUT: The first line of input consists of the size of the array The next line consists of the array of size m OUTPUT: Output consists of a single line of integers

REC-CIS	
	CONSTRAINTS:
	1<=m<=106 0<=A[i]<=106
	NOTE: The indexing of the array starts with 0.
	SAMPLE INPUT
